With **RelaxF**,
the latest Radio Frequency technology,
your Transformation comes with Ease

With RelaxF, the latest Radio Frequency technology, your Transformation comes with Ease

Looking pretty is no longer just about having a pretty face; it also encompasses having a healthy looking body. RelaxF, a new radio frequency technology for deep tissue heating not only tightens and rejuvenates your skin; it even enables tissue contouring, sport therapy, as well as post liposuction and acne treatment. A true monopolar and bipolar for deep heating, RelaxF starts immediately beneath the epidermis and goes all the way down to the fatty layer.

The concept of this technology is to:

- regenerate collagen and elastin fibres
- tone up muscles
- give cellular and circulatory stimulation

Benefits of the RelaxF technology:

- skin tightening and skin rejuvenation
- improvement in scar appearance
- post liposuction treatments
- acne treatment
- cellulite reduction
- elimination of nail fungus

However, the uniqueness of this machine is the **non-invasive, non-ablative** and **non-laser** techniques at which it works.
